Welcome to the 8th issue of the **Dangerous Goods Report**

Dangerous Goods compliance isn't just about choosing the right labels, placards and packaging. It's also about making sure everyone on your team has the training to make those choices correctly.

This issue of the Dangerous Goods Report looks at the often stress-inducing process of ensuring hazmat training compliance, and the pros and cons of online training solutions. We also examine the benefits of integrating DG software with your ERP system, and take a look at a new packaging technology that may soon revolutionize how lithium batteries are shipped. After a preview of next September's Dangerous Goods Symposium, you'll have a chance to test your label compliance acumen.

As always, we at Labelmaster are here to help you make sense of the ever-changing Dangerous Goods landscape. We hope you find the information and solutions in the Dangerous Goods Report to be useful, and we welcome any questions.

Alan Schoen President of Labelmaster

ONLINE RESOURCES

GET CONNECTED

For more information on handling lithium batteries throughout your DG supply chain, visit labelmaster.com/ lithium-battery-shipping.

STAY INFORMED The world of DG is constantly changing. To find updates on a wide range of DG topics, including lithium battery shipping, visit labelmaster.com/blog.

HEAR FROM OUR EXPERTS

The Master Series is a collection of short videos that provides practical perspectives on current DG issues. For more, visit labelmaster.com/masterseries.

MAINTAIN COMPLIANCE

From advanced shipping software to logistics consulting, Labelmaster Services can help keep your business on the right side of DG regulations. Visit labelmaster.com/services to learn more.

This Dangerous Goods Report is designed to provide accurate information regarding the subject matter covered. Every effort has been made to provide a simplified guide consistent with the various applicable regulations. However, if there is a discrepancy, the regulations are the final authority.

ONLINE HAZMAT TRAINING Compliance with Convenience "Let me see your training records."

Many DOT and OSHA inspections start with those very words. For organizations that ship hazardous materials, that sentence can be the prelude to a relatively painless inspection—or the beginning of a very long day.

No Dangerous Goods professional will deny that a welltrained workforce is essential to the safe and compliant transport of hazardous materials. Yet many organizations find it difficult to comply in full with the training regulations defined by the 49 CFR.

Assuring the competency and safety of their employees with fully compliant training is an ongoing challenge for nearly every Dangerous Goods shipper. In fact, a recent Labelmaster survey revealed that **47% of DG trainers and managers do not agree that their employees are properly trained.**

Fortunately, technology has made that challenge somewhat more manageable.

THE CHALLENGES OF HAZMAT TRAINING

49 CFR Part 172.704 requires any employee who works with hazardous materials to undertake—and be tested on—as many as five different types of training:

- 1. General awareness/familiarization training
- 2. Function-specific training
- 3. Safety training
- 4. Security awareness training
- 5. In-depth security training

Those requirements alone can be challenging, **but training compliance is a constantly moving target.** The requirement for function-specific training can require an employee to undergo new training whenever he or she assumes a new role—shipping lithium batteries, for instance—in an organization.

COVER STORY Plus, training isn't a "one-and-done." Even if an employee's responsibilities never change, 49 CFR requires the employee to renew his or her training at least once every three years.

Labelmaster Senior Consultant Alicia Saenz adds, "Some companies have high turnover or temporary employees around the holidays, and they don't realize those are hazmat employees who need to be trained."

Take those dynamic requirements, multiply them by all the locations and subsidiaries a company might have, and it's easy to see why coordinating training to stay compliant can be a perpetual challenge.

ONLINE MODULES MAKE TRAINING LESS CHALLENGING

Over the last decade or so, managers and DG trainers have embraced interactive online training as part of the solution to that perpetual challenge.

Whereas once trainers had to convene employees for several days to work through the material and conduct testing, now employees can train at their own pace, wherever they happen to be and whenever they have time. Most online modules are fully self-contained, including tests and certifications.

Online training saves time and money while boosting productivity. An employee can pause training to focus on work during busier periods, and resume the module when work slows down.

Still, some trainers say interacting with a screen is no substitute for getting your questions answered by a live trainer.

"We usually favor a blended solution," says Labelmaster Senior Manager Jim Shimko. "Employees with more complex roles need the depth of classroom training, while others do fine with online. Online works well for recurrent training, too, with a lot more flexibility."

Ultimately, of course, an online module is only as good as the people who create it.

LABELMASTER HAZMAT TRAINING: CERTIFIED STRESS-FREE

Keeping hazmat employees compliantly trained, as noted above, can be stressful. Online modules relieve some of that stress, but a trainer or manager can't truly relax without complete confidence in the accuracy and accessibility of those modules.

Unfortunately, nearly one-third of DG pros believe there are no training products on the market that meet their organizations' needs.

That's why Labelmaster, for the first time, is introducing its own online training modules, developed by the same experts who support Labelmaster customers every day. The first three modules offered are:

- GENERAL AWARENESS
- LITHIUM BATTERIES—EXCEPTED
- LITHIUM BATTERIES—FULLY REGULATED

These fully interactive modules—on their own, or combined with classroom training make the experience of keeping a hazmat workforce compliantly trained as stress-free as possible.

"I'm excited we can offer courses from the Labelmaster toolbox to meet our clients' needs," says Saenz. "A great online course, with good graphics and real interaction, helps people absorb the material better. They won't just be able to pass the test—they'll actually be able to do their jobs better."

Learn more about Labelmaster online hazmat training at **labelmaster.com/training** and see **page 15** for available online courses.

COMPETENCY-BASED TRAINING: A NEW CHALLENGE?

The next edition of the ICAO Technical Instructions (2019–2020) and the 60th edition of the IATA Dangerous Goods Regulations will include new Dangerous Goods training requirements based on the goals of competency-based training (CBT).

If you're not familiar with CBT, no need to lose any sleep. You have two years to get comfortable with the concept, and the shift shouldn't radically change the way anyone does business.

Labelmaster Senior Manager Jim Shimko adds, "CBT will give companies more effective validation of online training content."

The biggest difference is that CBT is focused on the training requirements related to an employee's actual responsibilities. While current training includes function-specific training, CBT requires the employer to verify that the employees have the knowledge and skills to perform their functions compliantly.

CBT identifies the key competencies that need to be achieved, determines the most effective way of achieving them, and establishes valid and reliable assessment tools to evaluate their achievement. Under the CBT approach, it is not sufficient to send employees to a class and have them successfully pass a test. There is a greater onus on the employer to ensure employees have the skills and knowledge to perform their designated functions.

The goal? A workforce that's more accurately trained to perform the tasks of transporting hazardous materials safely and compliantly.

Until 2019, CBT will be encouraged, but not mandatory. Questions? **Contact services@labelmaster.com.**

INTEGRATED DANGEROUS GOODS SOFTWARE

DG Software + ERP = streamlined compliance

Labelmaster's 2016 survey of Dangerous Goods shippers revealed some uncomfortable doubts about companies' abilities to ship hazmat compliantly:

believed their shipping technology was not forward-thinking

did not believe their companies had the right technology in place

DG software should be standard for any organization that ships hazardous materials regularly. But, as these survey results show, just having software doesn't automatically inspire confidence. It needs to be the right software, with the right setup, both for now and the foreseeable future.

That's why more of today's shippers are exploring fully integrated DG software.

DG SOFTWARE IS ONLY PART OF THE SOLUTION

All but the smallest shippers now run their operations on enterprise resource planning (ERP) software. But many have been slower to adopt DG software, even as DG shipping has gotten more complicated.

DG software helps companies ship hazmat compliantly by classifying shipments, producing documentation, and directing correct packaging, labels and markings. Yet many shippers find that running DG software alongside their ERP systems adds extra steps to their shipping operations.

Without ERP integration, even the best DG software is a less-than-ideal solution.

"You might be getting the best output, but it's more work," says Labelmaster Vice President of Software & Services Forest Himmelfarb. "You have two separate sets of addresses, and you have to learn two different interfaces. There's a lot of wasted time and effort."

Some ERP systems do offer DG functionality, but Himmelfarb warns, "They're not very robust or sophisticated, and there's no guarantee that they're up to date on the latest regulations.

"For the most accurate, most streamlined operation, you want DG functionality fully integrated with your ERP."

ONE SYSTEM, ONE SOLUTION

When DG software is fully integrated into an ERP, they run like one system—because they **are** one system:

- Users work with one familiar interface.
- When DG functions are required, the system accesses them seamlessly.
- There's no wasted time or effort—data needs to be entered only once.
- Less data entry means errors can be reduced or eliminated.
- Training is simplified because there's only one interface to learn.

Plus, integrated DG software updates regulations and tables automatically, so the ERP stays current and keeps shipments compliant.

"Integrating the systems takes some upfront IT work, but it's well worth it," says Himmelfarb. "You get a simplified shipping process with more robust DG capabilities. Long story short, it's the ideal solution."

LABELMASTER'S DGIS ALLOWS API INTEGRATION

Labelmaster's DGIS software is the most robust Dangerous Goods software available that allows API integration. Many programmers consider an API to be the most sophisticated level of integration between any two systems.

API stands for "applied program interface." APIs allow one cloud-based program—like a shipper's ERP platform—to link to another cloud-based program without any interruptions to its interface. To the user, it appears as if everything is part of the same system.

"It's like when a website includes a YouTube video," adds Himmelfarb. "You don't have to open YouTube to watch the video. It's right there on the page you're already viewing."

With its API technology, DGIS integrates seamlessly with most major ERP platforms, including SAP. Himmelfarb says, "Integrating DGIS with your ERP system gives you true bestof-breed logistics technology for streamlined compliance."

Learn more about DGIS integration at labelmaster.com/software.

STATE I CON

Lithium battery shipping has never been more challenging. Will the future be easier?

Since 2014, lithium batteries have been the #1 story in the Dangerous Goods galaxy, and there's no real #2. Battery-related topics have dominated the Dangerous Goods Symposium (see page 10) and the Labelmaster blog. But will this always be the case?

A SNAPSHOT OF CURRENT REGULATIONS

A complete review of lithium battery transport regulations would require most of the pages of this magazine, but here's a high-level view of the most important restrictions as of May 1, 2017:

- No standalone lithium batteries (UN 3480 and 3090), in any quantity or packaging, may be shipped as cargo on passenger aircraft.
- A number of airlines have imposed variations that require standalone batteries to be shipped only under Section IA or IB of packing instructions 965 or 968 (e.g., FedEx Express and and UPS Air will not accept UN 3090 or UN 3480 offered as Section II). Today there are more than 140 airline variations associated with lithium batteries, meaning many locations are not serviced by air transport.
- Batteries packed with or in equipment (UN 3481 and 3091) may still be shipped on passenger aircraft, subject to regulations.
- All lithium batteries may still be transported on cargo-only aircraft, subject to regulations and carrier restrictions.
- Standalone lithium ion batteries (UN 3480) can be shipped only by air with a state of charge at 30% or less.

- ICAO is expected to announce new standards for lithium battery packaging and transport based on the Society of Aeronautical Engineers G-27 Lithium Battery Packaging Performance Standard.
- The PHMSA HM-215N Final Rule, mandating new Class 9 Lithium Battery labels in harmonization with the 2017–2018 ICAO Technical Instructions, was published March 30, 2017. Mandatory compliance begins January 1, 2018.
- The UN Transport of Dangerous Goods Sub-Committee has embarked on a major initiative to reconsider the classification of lithium batteries. The first meeting was held in Montreal, April 27–29, 2017.

Would regulatory bodies reevaluate these restrictions if a technological advance were made to make lithium battery transport safer?

THE FUTURE OF COMPLIANT LITHIUM BATTERY SHIPPING

Labelmaster recently partnered with a premier technology provider to design and develop a new lithium battery packaging solution that will transform lithium battery transport.

The packaging is code-named "Omega." Its single-use fiberboard and multi-use metal packages:

- + Are lighter and far less complex than today's compliant packaging
- + Are easy to assemble
- + Require no extra inner packaging, gel-packs, pellets or liners

Yet Omega packs and boxes contain pressure, fire, flame, gas and ballistic projectile hazards well enough to meet ICAO G-27 draft standards at a 100% state of charge.

LIGHTWEIGHT FIBERBOARD FOR SINGLE USE

> MULTI-USE METAL FOR LARGER BATTERIES AND QUANTITIES

Labelmaster has applied for a U.S. Department of Transportation Special Permit for Omega packaging.

We expect this packaging to be a game-changer for all or any of the following:

- Electronics retailers
- Medical device manufacturers
- Third-party logistics
- Reverse logistics
- Battery recycling and disposal

Interested in testing Omega packaging for your lithium battery shipping needs? Contact Marilyn Barkley at mbarkley@labelmaster.com.

Watch the demo videos at labelmaster.com/omega

LABELMASTER WILL HOST THE 12TH ANNUAL DANGEROUS GOODS SYMPOSIUM SEPTEMBER 6–8, 2017, AT CHICAGO'S HISTORIC DRAKE HOTEL

The Drake may be most famous for its role in that 1980 classic movie, *The Blues Brothers*. But you don't need a full tank of gas, half a pack of cigarettes and dark sunglasses to make it to Chicago for the 2017 Dangerous Goods Symposium. All you need is to register!

Sign up now at labelmaster.com/symposium

SYMPOSIUM SESSIONS YOU WON'T WANT TO MISS

As always, we'll cover all the important topics that make the Symposium a can't-miss destination for DG pros worldwide:

- International regulatory updates: ICAO, IMDG, ADR, GHS and TDG, IAEA
- North American regulatory updates:
 49 CFR, Rail
- Safety management systems
- Technology and training workshop
- Auditing workshop
- PHMSA workshop
- Regulatory imperatives: carriers, regulators and manufacturers
- And, of course ... lithium batteries!

Here's what DG pros said about the 2016 Dangerous Goods Symposium

"I think it's the ultimate conference. What Labelmaster brings to the table is absolutely unlike any other event I go to."

Sonia Irusta, Bureau of Dangerous Goods, Ltd

"There are other trade shows and meetings out there, but no other conference, symposium or meeting actually focuses on what instructors need to do to perform their jobs better."

Jay Johnson, Inmark

"This is where you get all the updates. You have manufacturers, shippers, redistributors, carriers, attorneys, PHMSA, IATA. Everyone is here."

Erin Gaul, Geodis

"There are so many different industries here, it's definitely an eye-opener."

Brandon Keeling, Republic Airways Holdings

"The competency-based training session was very helpful because that's such a huge push right now."

Pete McCraren, United Airlines

"It's been quite an eye-opener. I like the open forum where people can ask questions. You realize there are other people out there who have similar issues."

Irena Mayne, Monarch Regulatory Services, Inc.

"The best Dangerous Goods professionals in the business are here, and you'd be silly to not come and meet them."

David Brown, Asurion

"I'm gushing about this event. I've had such a great time. Everybody's been awesome."

Angela Trupo, MPI Research, Inc.

HOW DO YOU SPOT A Non-compliant HAZMAT LABEL?

Differences between compliant and non-compliant labels and markings may be hard to notice.

Shippers often complain about the hair-splitting differences spelled out by hazmat regulations. And while it's true that a difference of a gram here or a millimeter there isn't likely to make a shipment any less safe, **regulations have to be exact, or there's no point in enacting them.**

Label regulations can seem especially persnickety. The difference between a compliant label and a cheaper, non-compliant label may be small and hard to notice, but you can bet your supply chain partners—and possibly DOT inspectors—will catch them.

Non-compliant labels will cost you more in the long run, due to fines and the cost of resending rejected shipments. But how do you spot them?

WHAT MAKES THESE LABELS AND MARKINGS NON-COMPLIANT?

On the next page are six non-compliant labels and markings, side by side with their compliant Labelmaster counterparts. We've detailed the errors and inconsistencies that make these cheaper products non-compliant.

Visit **labelmaster.com/compliance-is** to learn more about how Labelmaster can help keep your shipments in compliance.

HAZARD CLASS 2 FLAMMABLE GAS TAB LABEL

What's wrong with it?

- Incorrectly rounded corners
- Incorrect inner border measuring between 1.2 and 1.3 mm wide
- Irregular outer border varies between 4.4 mm and 4.8 mm
- Hazard Class number exceeds the maximum allowed size of 12.7 mm

NON-FLAMMABLE GAS

HAZARD CLASS 2 NON-FLAMMABLE GAS LABEL

What's wrong with it?

- At 99 mm x 99 mm, does not meet the requirement to be a minimum of 100 mm on each side
- Is not a "square on point"
- Incorrectly rounded corners
- Incorrect inner border measuring approximately 1.7 mm wide
- Irregular outer border varies between 4.2 mm and 5.4 mm

HAZARD CLASS 3 FLAMMABLE LIQUID LABEL

What's wrong with it?

- Incorrectly rounded corners .
- Incorrect inner border measuring less than 1 mm wide
- Irregular outer border varies between 4.5 mm and 5 mm
- May not meet color tolerances specified in §172.407(d)

HAZARD CLASS 3 FLAMMABLE LIQUID TAB LABEL •

What's wrong with it?

- Incorrectly rounded corners
- Incorrect inner border measuring less than 1 mm wide
- Irregular outer border varies between 5.75 mm and 6 mm
- Hazard Class number exceeds the maximum allowed size of 12.7 mm

MARINE POLLUTANT MARK

What's wrong with it?

- At 99 mm x 99 mm, does not meet the requirement to be a minimum of 100 mm on each side
- Is not a "square on point"
- Incorrectly rounded corners

RADIOACTIVE MATERIAL, EXCEPTED PACKAGE LABEL

What's wrong with it?

The red hatch outer border is in the opposite diagonal direction of the figures displayed in ICAO/IATA manuals

ONLINE TRAINING

3 NEW ONLINE TRAINING COURSES NOW AVAILABLE!

Labelmaster is proud to introduce three new online learning courses to keep your employees and shipments safe and compliant.

Online training provides the flexibility to take your course anytime and anywhere you have an Internet connection. You choose how and when to fit it into your work day, which means no lost productivity. We have three new and engaging training modules to help your business stay in compliance.

GENERAL AWARENESS HAZMAT TRAINING

PRODUCT NUMBER	DESCRIPTION	QUANTITY PRICE 1-9	QUANTITY PRICE 10+
SHPGA	The U.S. Department of Transportation requires the general awareness training specified in 49 CFR Part 172.704 be taken every three years. This 90-minute interactive online course meets the general awareness training requirements.	\$99.00	\$75.00

SHIPPING EXCEPTED LITHIUM BATTERIES

[PRODUCT NUMBER	DESCRIPTION	QUANTITY PRICE 1-9	QUANTITY PRICE 10+
	SHPEXLB	A 60-minute course for individuals who perform or direct the functions of packaging, marking, labeling or loading packages containing excepted lithium batteries for shipment by highway, rail, air or vessel.	\$129.00	\$100.00

FULLY REGULATED LITHIUM BATTERY SHIPPING

PR	ODUCT NUMBER	DESCRIPTION	QUANTITY PRICE 1-9	QUANTITY PRICE 10+

LITHIUM BATTERY MARKS

With the recent changes in lithium battery shipping regulations, these marks can now be used on all packages carrying lithium ion or metal batteries. Available as 120mm x 110mm or 105mm x 74mm markings in paper or PVC-free film, these handling marks have space to designate the UN number of the lithium battery being shipped as well as a telephone number for additional information required by the regulations.

- Choose personalized labels and we'll imprint your information for you
- Also available preprinted with CHEMTREC[®] emergency contact information and UN numbers (only companies registered with CHEMTREC[®] are authorized to use these labels)

Also available with an included tab attached below the mark with space to provide additional information (e.g., ICAO/ IATA Section II Packing Instruction number, proper shipping name, etc.).

PRODUCT NUMBER	DESCRIPTION	FORMAT	UNITS	PRICE
LB735	Blank, 105mm x 74mm, Paper	Roll	500	\$40.98

PACKAGING

Stay in compliance with the latest hazmat shipping regulations with Labelmaster's full line of UN-certified packaging products. From 4GV and glass to metal and plastic, we offer a complete selection of packaging options. Specialized packaging options include:

- §173.13 packaging
- Special permit packaging
- · Battery packaging

- Infectious substance packaging
- · Parts packaging
- · Temperature-controlled packaging

In addition, a wide range of drums, jerricans, pails, wooden boxes, glass bottles, plastic bottles, caps and accessories is available. Our UN packaging has been designed, tested and certified in accordance with 49 CFR, ICAO, International Air Transport and IMDG/IMO requirements.

DAMAGED BATTERY RETURNS? THIS IS HOW IT'S DONE.

Labelmaster's Cellphone Recovery Kit is the state of the art in single-use packaging for the return of damaged battery-powered products, with relief from DOT 49 CFR §173.185 regulations via a DOT-SP 16011 Special Permit. See a step-by-step video on packaging and closure instructions at labelmaster.com/shop/klitspx1cell.
